Connectionist Speech Recognition

2012-12-06

connectionist speech recognition a hybrid approach describes the theory and implementation of a method to incorporate neural network approaches into state of the art continuous speech recognition systems based on hidden markov models hmms to improve their performance in this framework neural networks and in particular multilayer perceptrons or mlps have been restricted to well defined subtasks of the whole system i e hmm emission probability estimation and feature extraction the book describes a successful five year international collaboration between the authors the lessons learned form a case study that demonstrates how hybrid systems can be developed to combine neural networks with more traditional statistical approaches the book illustrates both the advantages and limitations of neural networks in the framework of a statistical systems using standard databases and comparison with some conventional approaches it is shown that mlp probability estimation can improve recognition performance other approaches are discussed though there is no such unequivocal experimental result for these methods connectionist speech recognition is of use to anyone intending to use neural networks for speech recognition or within the framework provided by an existing successful statistical approach this includes research and development groups working in the field of speech recognition both with standard and neural network approaches as well as other pattern recognition and or neural network researchers the book is also suitable as a text for advanced courses on neural networks or speech processing

A Hybrid Approach for Power Plant Fault Diagnostics

2017-12-30

this book provides a hybrid approach to fault detection and diagnostics it presents a detailed analysis related to practical applications of the fault detection and diagnostics framework and highlights recent findings on power plant nonlinear model identification and fault diagnostics the

effectiveness of the methods presented is tested using data acquired from actual cogeneration and cooling plants ccps the models presented were developed by applying neuro fuzzy nf methods the book offers a valuable resource for researchers and practicing engineers alike

Intelligent Information Processing and Web Mining 2003-05-09

this edited book contains articles accepted for presentation during the intelligent information processing and mining conference iis iipwm 03 held in zakopane poland on june 2 5 2003 a lot of attention is devoted to the newest developments in the area of artificial intelligence with special calls for contributions on artificial immune systems and search engines this book will be a valuable source for further research in the fields of data mining intelligent information processing immunogenetics machine learning or language processing for search engines

A Hybrid Approach to Requirement Level Impact Analysis 2001

how do you manage unclear hybrid approach requirements is there any additional hybrid approach definition of success how do you lead with hybrid approach in mind what are the hybrid approach security risks what other organizational variables such as reward systems or communication systems affect the performance of this hybrid approach process defining designing creating and implementing a process to solve a challenge or meet an objective is the most valuable role in every group company organization and department unless you are talking a one time single use project there should be a process whether that process is managed and implemented by humans ai or a combination of the two it needs to be designed by someone with a complex enough perspective to ask the right questions someone capable of asking the right questions and step back and say what are we really trying to accomplish here and is there a different way to look at it this self assessment empowers people to do just

that whether their title is entrepreneur manager consultant vice president cxo etc they are the people who rule the future they are the person who asks the right questions to make hybrid approach investments work better this hybrid approach all inclusive self assessment enables you to be that person all the tools you need to an in depth hybrid approach self assessment featuring 963 new and updated case based questions organized into seven core areas of process design this self assessment will help you identify areas in which hybrid approach improvements can be made in using the questions you will be better able to diagnose hybrid approach projects initiatives organizations businesses and processes using accepted diagnostic standards and practices implement evidence based best practice strategies aligned with overall goals integrate recent advances in hybrid approach and process design strategies into practice according to best practice guidelines using a self assessment tool known as the hybrid approach scorecard you will develop a clear picture of which hybrid approach areas need attention your purchase includes access details to the hybrid approach self assessment dashboard download which gives you your dynamically prioritized projects ready tool and shows your organization exactly what to do next you will receive the following contents with new and updated specific criteria the latest quick edition of the book in pdf the latest complete edition of the book in pdf which criteria correspond to the criteria in the self assessment excel dashboard example pre filled self assessment excel dashboard to get familiar with results generation in depth and specific hybrid approach checklists project management checklists and templates to assist with implementation includes lifetime self assessment updates every self assessment comes with lifetime updates and lifetime free updated books lifetime updates is an industry first feature which allows you to receive verified self assessment updates ensuring you always have the most accurate information at your fingertips

Hybrid Approach A Complete Guide - 2019 Edition 2019-07-07

today there is an increasing demand for data integration and

analytics due to the availability of records in multiple databases there is necessity to match and link data among variety of data sources such as hospitals banks insurance agencies government agencies etc for mutual benefits integration and analysis purposes often the records that correspond to the same entity from these sources are matched and integrated it will enrich data with additional valuable information and allow data analyses that are impossible on individual databases this integrated data can be further published and utilized for research and providing high quality services however given the personally identifying information about the individuals and sensitive nature of data privacy of data is a serious concern during record matching the presence of erroneous identifiers makes record matching complicated hence it needs approximate matching to find similarities between the same person records as the databases contain personal identifiers and sensitive data there is a requirement for protecting privacy of individuals for privacy preserving record linkage pprl bloom filter encoding is one of the current state of art technique to encode sensitive information while still enabling approximate matching of attribute values the bloom filter encoding techniques were found to be promising technique for privacy preserving record linkage the various attack methods and hardening methods for bloom filter encoding has been studied the bloom filter encoding hardening techniques enforce increased privacy against attacks but with the reduction in linkage accuracy the attack method v found to be more successful to correctly re identify attribute values as compared to previous attack methods i to iv each of the bloom filter based hardening technique has their own strengths and weaknesses however most of the bloom filter based pprl techniques suffer from re identification attacks and faces challenge of achieving trade off between privacy and accuracy during secure record linkage thus an enhanced privacy preserving technique is introduced to provide better security during record matching it performs better than bloom filter based encryption techniques with respect to re identification of attributes values moreover to improve the linkage accuracy the two factor encoding for pprl is proposed it provides greater precision recall and f measure in comparison to basic bloom balanced bloom and cellular automata based pprl

techniques additionally the similarity matching strategy is designed for secure record linkage to increase accuracy using suitable combinations of attributes

the hybrid approach combines the two most popular approaches to var estimation riskmetrics and historical simulation it estimates the var of a portfolio by applying exponentially declining weights to past returns and then finding the appropriate percentile of this time weighted empirical distribution this new approach is very simple to implement empirical tests show a significant improvement in the precision of var forecasts using the hybrid approach relative to these popular approaches

the measurement of the efficiency of public education expenditure using parametric and non parametric methods has

proven challenging this paper seeks to overcome the difficulties of earlier studies by using a hybrid approach to measure the efficiency of secondary education spending in emerging and developing economies the approach accounts for the impact of the level of development on education outcomes by constructing different efficiency frontiers for lower and higher income economies we find evidence of large potential gains in enrollment rates by improving efficiency these are largest in lower income economies especially in africa reallocating expenditure to reduce student to teacher ratios where these are high and improving the quality of institutions as measured by the governance effectiveness indicator in the world bank s governance indicators database could help improve the efficiency of education spending easing the access to education facilities and reducing income inequality as measured by the gini coefficient could also help improve efficiency

The Best of Both Worlds 1997

this book provides readers with a practical guide to the principles of hybrid approaches to natural language processing nlp involving a combination of neural methods and knowledge graphs to this end it first introduces the main building blocks and then describes how they can be integrated to support the effective implementation of real world nlp applications to illustrate the ideas described the book also includes a comprehensive set of experiments and exercises involving different algorithms over a selection of domains and corpora in various nlp tasks throughout the authors show how to leverage complementary representations stemming from the analysis of unstructured text corpora as well as the entities and relations described explicitly in a knowledge graph how to integrate such representations and how to use the resulting features to effectively solve nlp tasks in a range of domains in addition the book offers access to executable code with examples exercises and real world applications in key domains like disinformation analysis and machine reading comprehension of scientific literature all the examples and exercises proposed in the book are available as executable jupyter notebooks in a github repository they are all ready to be run on google colaboratory or if

preferred in a local environment a valuable resource for anyone interested in the interplay between neural and knowledge based approaches to nlp this book is a useful guide for readers with a background in structured knowledge representations as well as those whose main approach to ai is fundamentally based on logic further it will appeal to those whose main background is in the areas of machine and deep learning who are looking for ways to leverage structured knowledge bases to optimize results along the nlp downstream

re purposing suzuki a hybrid approach to actor training introduces a system of text analysis that synthesizes physical psychological and vocal components in order to truthfully embody heightened texts and contexts by understanding how the author has re purposed suzuki and other physical training methods as well as stanislavski readers will gain an awareness of how to analyze a particular training method by extrapolating its key components and integrating it into a holistic embodied approach to text analysis the book explores a method of physical scoring via rules of the body and rules of composition as well as a method of approaching heightened texts from greek drama to post modern playwrights that draws on the individual actor s imagination and experience and integrates voice mind and body readers will be able to either replicate this approach or

apply the logic of its building blocks to assemble their own personal creative process applicable to a variety of performance genres this is a source book for actors theatre students practitioners and educators interested in assembling tools derived from different sources to create alternative approaches to actor training while the process outlined in the book evolves in a classroom setting the components of the pedagogy can also be practiced by individuals who are interested in finding new ways to explore text and character and bring them into their own personal practice

in recent years substantial efforts are being made in the development of reliability theory including fuzzy reliability theories and their applications to various real life problems fuzzy set theory is widely used in decision making and multi criteria such as management and engineering as well as other important domains in order to evaluate the uncertainty of real life systems fuzzy reliability has proven to have effective tools and techniques based on real set theory for proposed models within various engineering fields and current research focuses on these applications advancements in fuzzy reliability theory introduces the concept of reliability fuzzy set theory including various methods techniques and algorithms the chapters present the latest findings and research in fuzzy reliability theory applications in engineering areas while examining the implementation of fuzzy reliability theory among various industries such as mining construction automobile engineering and more this book is ideal for engineers practitioners researchers academicians and students interested in fuzzy reliability theory applications in engineering areas

A hybrid approach of neutrosophic sets and DEMATEL method for developing supplier selection criteria 2014

this paper presents a hybrid algorithm for multi stage linear programs arising from time phased or dynamic models the hybrid computation is based on a nested decomposition algorithm and the revised simplex method initial computational experience is reported author

Mixed-Tenancy Systems - A hybrid Approach between Single and Multi-Tenancy 2007

this paper presents an overview of defscriber a hybrid goal driven and data driven system for definitional questions that

was developed at columbia university defsciber combines knowledge based and statistical methods to answer definitional questions of the form what is x the authors explain how the system was modified and applied to answer definitional questions in the trec 2003 qa track they present defsciber s results on the definitional questions which were significantly above median achieving an average f score of 338 compared with the median of 192 finally they analyze their scores on certain individual questions discussing areas in which their system performed well and areas in which it could be improved

organizations invest a lot of time money and energy into developing and utilizing risk management practices as part of their project management disciplines yet when you move beyond the project to the program portfolio pmo and even organizational level that same level of risk command and control rarely exists with this in mind well known subject matter expert and author andy jordan starts where most leave off he explores risk management in detail at the portfolio program and pmo levels using an engaging and easy to read writing style mr jordan takes readers from concepts to a process model and then to the application of that customizable model in the user s unique environment helping dramatically improve their risk command and control at the organizational level he also provides a detailed discussion of some of the challenges involved in this process risk management for project driven organizations is designed to aid strategic c level decision makers and those involved in the project program portfolio and pmo levels of an organization j ross publishing offers an add on for a nominal fee downloadable tools and templates for easy customization and implementation

Re-Purposing Suzuki 1990

bayesian networks present a useful tool for displaying correlations between several variables this thesis presents a hybrid search strategy for structure learning in bayesian networks whose structure is a directed acyclic graph the general strategy performs a local search that meets the following criteria 1 the markov blankets in the model should be consistent with dependency information from statistical tests 2 minimizes the number of edges subject to the first constraint 3 maximizes a given score function subject to those constraints the strategy is adapted and optimized for learning structures for both discrete and continuous networks both algorithms are discussed and tested empirically both on synthetically generated structures and on real networks we show that adding dependency constraints can improve the quality of the learned models furthermore unlike purely structural strategies our hybrid method is robust enough to output high quality models even when available data is sparse
